

Spektrum Preset Model Files for DX Gen2 Transmitters

IMPORTANT NOTES FOR PRESET MODEL FILES

ATTENTION: SAFETY FIRST!

The preset model files referenced here can greatly simplify setting up complex programming in the transmitter/receiver for your favorite aircraft. **Because mechanical setups can vary on some types of models, it is your responsibility to perform all pre-flight setup and checks recommended in the product manual to ensure all controls are operating in the proper direction and within the manufacturer's recommended throws.** You should also take time to understand the anticipated flight characteristics for each flight mode that might be enabled (e.g. AS3X and SAFE Select). These presets are intended for use with the stock equipment in Bind-N-Fly® (BNF) and the recommended/stock equipment for Plug-N-Play (PNP) models. If it is listed for an Almost-Ready-To-Fly (ARF) model, it is intended for use with the recommended equipment and setup per that model's manual. By clicking the links below and using any of the information and files provided you acknowledge that pre-flight checks are solely the responsibility of the end user.

PRESET MODEL FILES IMPORT INSTRUCTIONS

1. Navigate to the Spektrum File Share Drive linked to above
2. Locate the .SPM file for your model and Download via Right-Click or with  icon
3. The file will be saved to your Downloads folder on your computer
4. Insert a name brand Class 6 16gb or smaller SD card into your PC
5. Copy the model file (.SPM File) to the SD card
6. Eject and remove the SD card and insert into SD card port on your DX transmitter
7. Press and hold scroll wheel button while powering on transmitter to access System Setup
8. Scroll to Transfer SD Card menu and select
9. Scroll to Select Option, click and select Import Model
10. A list of available model files will be listed, find and select the desired model to import
11. Select import, the new model preset will now be installed at the end of your model list
12. Make sure to confirm all controls and modes are functioning properly before use

NAVIGATING THE SPEKTRUM FILE SHARE DRIVE

This drive utilizes Google's robust file sharing platform, Google Drive. If you are not familiar with it, there are dozens of tutorials and videos that Google and third party groups have produced that should help you understand the directory system.

These Files and Folders are for viewing and downloading only, you cannot upload or change any aspect of any files and you only have access to what we want you to see. You can also share the file location via a URL link with others via a link that is provided when using Right Click on your mouse.

There is a search bar at the top that will allow you to search for the files you are looking for using the models Item#, Name, file type, etc. If you wish to browse, the files are grouped in folders and labeled appropriately for the device they are intended for.

TIPS AND CROSS COMPATIBILITY

- For the best experience, make sure your transmitter is up to date, if it is not, you may get errors when importing files
- If your Transmitter freezes or does not power on when a SD card is installed, it is likely a corrupt or incompatible card. Try another
- DX8 Gen1 and DX7S (older silver face plate models) are not cross compatible with ANY OTHER VERSION
- DX Gen2 model files can be used on all DX Gen2 Transmitters, as well as NX and iX transmitters
 - NX and DX files can be imported to iX transmitter
 - iX files are only compatible with iX transmitters at this time

Spektrum File Types Legend

- .SPM = DX Model File Type (Gen1 and Gen2)
- .NSPM = NX Model File Type
- .ISPM = iX Model File Type
- .SRM = AS3X Receiver Preset File Type
- .SRD = DXe Model File Type
